MISSION BRIEFING:

The world has gone dark. Across the campus, emergency screens flicker with a warning: **DOOMSDAY PROTOCOL ACTIVE**. A mysterious transmission has been intercepted from a damaged archive. The system is fractured, and the archive is incomplete.

Someone has scattered five encrypted records across the system. Each contains a payload that looks meaningless at first glance—and the encryption has been deliberately tampered with to throw you off.

Your task force has been activated. Recover the records, decode their payloads, and track down the physical locations they point to. Keep track of every discovery: the path you take is just as important as the destinations. The clock is running.

RECOVERED RECORD A17

A burst of static tears across the command display. The first recovered file is tagged A17. The binary string appears to have its first half completely reversed.

```
01001001 01010100 01000001 01001110 01001001 01001101
01000001 01011000 01000101 01001111 01001110 00100000
    01000010 01001100 01001111 01000011 01001011
```

MISSION QUESTION: WHAT DOES THIS PAYLOAD REVEAL? DECODE IT AND RECORD YOUR FINDING BEFORE MOVING ON.
